# NOTES FOR CONTRIBUTORS

## General

The journal publishes full length *Papers*, *Shorter Communications*, *Review Articles* and *Letters to the Editors*.

All contributions should conform to the Aims and Scope shown at the front of the journal. The Editors welcome contributions on new topics that fall within the broad scope of *Chemical Engineering Science*.

*Papers* should be complete and authoritative accounts of work which has special significance and must be presented clearly and concisely.

*Shorter Communications* deal with new ideas and specific points rather than developing a theme, and should not exceed the equivalent of 2000 words including illustrations and tables.

*Review Articles* are commissioned by the Executive Editor on the advice of the Editors. Authors wishing to submit a review article should contact an Editor or the Executive Editor.

*Letters to the Editors* are of two kinds. Letters commenting on work published in the journal should be sent to the Executive Editor. Letters concerned with novel and particularly interesting concepts, or giving advance results that will subsequently be reported fully in a paper, should be sent to the appropriate Editor in the same way as a paper.

## Submission of Work

The attention of all intending authors is drawn to the Aims and Scope on the title page and the publication and copyright regulations on the inside front cover. Only contributions not submitted or published elsewhere can be accepted for review. Furthermore, authors must agree not to submit elsewhere a paper submitted to and accepted by *Chemical Engineering Science*. Authors should refer to the Executive Editor if they are in doubt about what constitutes publication elsewhere. Authors are responsible for the originality of their texts. Work may be submitted either to an Editor in the author's regional area or to an Editor having particular research expertise in the subject of the work. The Executive Editor will be pleased to receive submissions in cases where there is no regional allocation. The three North American regional Editors each handle papers which fall within the journal's Aims and Scope. However, authors are requested to send papers concerned with catalysis, chemical reactor engineering, kinetics and thermodynamics to Professor Bell, with mathematical modelling, process systems, separation processes and transport phenomena to Professor Brown; and with adsorption or membrane processes and related phenomena to Professor Ruthven.

## Format of Contribution

All papers should be typed, double-spaced with wide margins, on one side of the pages only, in English. Three copies are required but original drawings and photographs should **not** be sent until work has been accepted for publication. Authors should submit a copy of any paper included in the references which is not yet published, e.g. "in press" or "submitted for publication". To minimize postal charges, the three copies of the paper are not in general returned to authors. Original drawings and photographs can be returned to an author if requested; otherwise these are discarded 1 month after publication.

**Title and Abstract** Make the title concise yet informative. The significance and achievement of each full length paper and review article should be stated in an abstract. Note that the title and abstract are used in indexing and abstracting services.

**Text** Technical descriptions of experimental methods should be given in detail only when such methods are new. Avoid footnotes.

**Address of author** It is essential that the author handling an accepted paper should keep both the Editor responsible for accepting the paper and the Publisher's Production Editor informed of any change in address.

**Units** SI units are required.

**Notation** Authors should supply a list of symbols and units used in the work.

## Articles on Disk

Authors are encouraged to submit **final and accepted** manuscripts on disk. Two copies of the printout should always be included. Disks must be clearly marked with at least the following: Operating system, disk format (DS/DD), software package used, Authors' names, short title of the paper.

## Figures, including Photographs

Original figures and photographs should only be supplied to the Editor's office when a paper has been accepted. Each figure or photograph should be clearly marked on the back with the names of the authors and the figure number.

Captions should be typed on a separate sheet.

**Line-drawings** should always be carefully prepared at about twice the final size, on plain white drawing paper, and suitable for direct reproduction. Laser printer output at 300 dots per inch for a two-to-one reduction on good quality paper is acceptable. Authors should take particular care to ensure that lettering on a figure will remain clearly legible after reduction.

**Photographs** should be enlarged sufficiently to permit clear reproduction. If words or numbers appear in photographs, two copies are required, one with the words or numbers clearly overprinted and the other without inscription.

**Colour figures** can be printed provided that, in the specific judgment of an Editor, the colour is essential to convey scientific information. There is no charge for the first two colour illustrations in a paper.

## Tables

These will normally be typeset. Large or long tables should be typed on continuing sheets with each sheet clearly identified by the table heading and the sequence.

## References

These must be listed in alphabetical order of first author, thus:

- to a book,  
Coulson, J. M., Richardson, J. F. and Sinnott, R. K., 1983, *Chemical Engineering Volume 6 (SI Units), Design*, pp. 274–304. Pergamon Press, Oxford.
- to a journal,  
Turner, J. C. R. and Murphy, T. K., 1983, A CSTR method for determining ion-exchange equilibria. *Chem. Engng Sci.* **38**, 147–153.

The former would be mentioned in the text as (Coulson *et al.*, 1983), the latter as (Turner and Murphy, 1983). If there are more than two works by authors in a given year, the letter a, b, etc. follows the date in each instance. Journal abbreviations should follow those cited in *World List of Scientific Periodicals*, 4th Edition.

## Proofs, Copyright and Reprints

**Proofs** Corrections to proofs must be restricted to errors introduced by the printers. Authors should return their proofs promptly, by fax if the corrections are minor, to expedite publication.

**Copyright** Authors are requested to read the note on copyright published inside the covers of each issue. A transfer of copyright form will be sent out with the proofs of a paper. This form should be signed in the appropriate section and returned with the corrected proofs, or as soon as possible afterwards.

**Reprints** Authors are provided with 25 reprints free of charge. Further supplies may be ordered on the reprint order form which accompanies the proofs; reprints may be ordered with or without covers.

# THE ELSEVIER SCIENCE COMPLETE CATALOGUE ON INTERNET

# THE ELSEVIER SCIENCE COMPLETE CATALOGUE 1995 ON CD-ROM

These catalogues feature all journals, books and major reference works from Elsevier Science. Furthermore they allow you to access information about the electronic and CD-ROM products now published by Elsevier Science.

Demonstration examples of some of these products are included.

## Features include:

### ELSEVIER SCIENCE

Catalogue on **INTERNET**

- All the journals, with complete information about journal editors and editorial boards
- Listings of special issues and volumes
- Listings of recently published papers for many journals
- Complete descriptions and contents lists of book titles
- Clippings of independent reviews of published books
- Book series, dictionaries, reference works
- Electronic and CD-ROM products
- Demonstration versions of electronic products
- Free text search facilities
- Ordering facilities
- Print options
- Hypertext features

### Extra features with the Catalogue on Internet

- Alerting facility for new & forthcoming publications
